BYOD

Our intelligent mobile now available as an app through the Google Enterprise Play Store

It is becoming increasingly common for companies in all industries to adopt a 'bring your own device' (BYOD) strategy, and so we have added the capability to make Cognito iQ Mobile available as a user-downloadable app in the Google Enterprise Play store. This enables your employees to use their own personal mobiles at work, rather than have an additional device that your company has to provide, with all the attendant costs and device management overheads.

The benefits

With BYOD you will:

REDUCE COSTS	Not only will you save the cost of providing employees with devices, but there is also the potential to scale back on mobile device management (MDM) software, which can deliver considerable savings.
IMPROVE EASE OF USE	If workers are using their own smartphones, they don't have to learn how to operate a new device; they are likely to find their own device intuitive and easy to use.
INCREASE PRODUCTIVITY	When employees use their own smartphone, you save not only in terms of the time it takes for them to train and become familiar with the device, but also in that they are typically more productive. Smartphone functionality, as compared to a company issued mobile, enables workers to complete admin and communication tasks as well as following the mobile workflow, without having to switch between devices.
ADD OR REMOVE WORKERS WITH EASE	Add temporary or peak time workers and scale back when required without the need to buy additional devices, which will then be surplus. BYOD also enables you to hire freelance workers or sub-contractors to cover short term gaps, or when skilled staff are hard to find, and on-board them seamlessly.
INCREASE EMPLOYEE SATISFACTION AND ENGAGEMENT	Having just one device makes it easier for workers to integrate their personal and work lives, leading to better work-life balance. Additionally, workers are more likely to choose an employer that allows the use of personal mobiles as they will be viewed as flexible, and up to date.

REDEFINING SERVICE

BYOD

Key product features

ENHANCED SCANNING CAPABILITIES	Using the smartphone camera, our BYOD app supports multiple options for enhanced barcode scanning, making it much faster for workers to scan a succession of parcels, or a number of parts, into the vehicle.
AUTOMATIC ERROR DIAGNOSTICS	As end-users install the software without the support of an IT department, we've carried out extensive quality assurance and device testing, and using automatic diagnostics, we can proactively monitor and address any issues as they arise.
SUPPORTS MULTIPLE OPERATING SYSTEM VERSIONS	We support Android operating systems for approximately five years from their release date. We currently support Android Lollipop, Marshmallow, Nougat, Oreo and Pie.
MDM AGNOSTIC	Our BYOD app will integrate with your mobile device management, regardless of what system you use.
FULLY SUPPORTED BY COGNITO IQ	Our highly trained team of Cognito iQ support engineers are here to provide excellent technical support.
